User

buatkan coding an web "daftar kesehatan online" Dengan isi sebagai berikut : halaman pertama : "Selamat Datang Di Rumah Keluarga Sehat"

halaman kedua : berisi pertanyaan berikut : a. pendaftaran faskes 1 b. pendaftaran rujukan rumah sakit riwayat penyakit gejala umur tanggal lahir domisili nama waktu pendaftaran

halaman ke tiga: "nomer antrian pendaftaran"

BLACKBOXAI

The user wants a simple web app "Daftar Kesehatan Online" with three pages:

- 1. First page: welcomes user with "Selamat Datang Di Rumah Keluarga Sehat"
- 2. Second page: a form with questions/fields:

- pendaftaran faskes 1 - pendaftaran rujukan rumah sakit - riwayat penyakit - gejala - umur - tanggal lahir - domisili - nama - waktu pendaftaran

- 3. Third page: shows "nomer antrian pendaftaran" (registration queue number)

I will create a single HTML file with inline CSS and JavaScript, implementing a multipage view with these three pages. The second page has a form with the described fields. On submission, it will generate the queue number and display it on the third page.

The design must be modern, visually interesting, and mobile-responsive fitting 600px height and 350px width with no scrolling needed.

Plan:

- Single HTML file

- Page 1: Welcome message and button to next page

- Page 2: Form with inputs for all requested fields, including proper input types (date for tanggal lahir, text for others, textarea for symptoms maybe)

- Page 3: Show queue number and form data summary

- Queue number can be autogenerated sequentially or random for demo purposes. Since no backend, queue number stored in localStorage or can just simulate a number for demonstration.

Now proceed to create the full HTML file.

`daftar-kesehatan-online.html`

```html
html
```

Selamat Datang Di Rumah Keluarga Sehat
